

The system behind Vox.

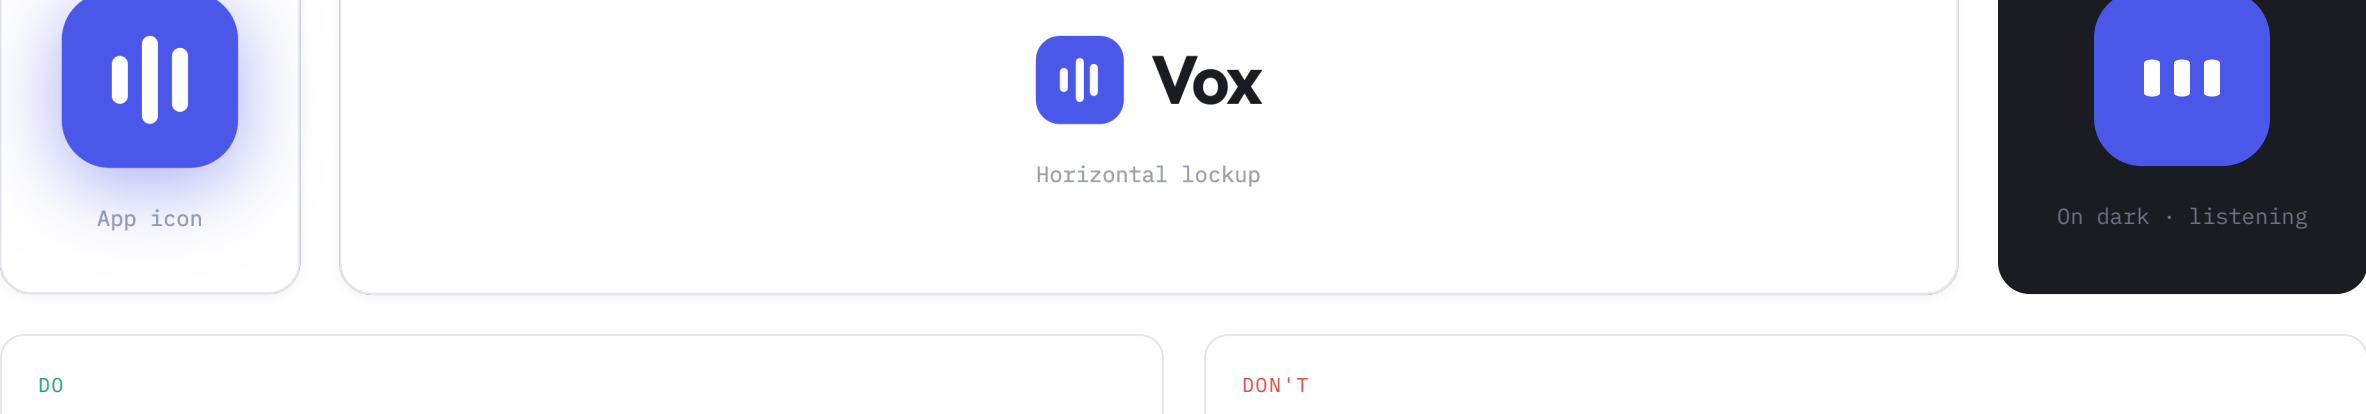

Vox is an always-on voice assistant that lives inside your machine and quietly gets work done — private by default, no cloud required. This is the visual language that makes it feel calm, precise, and trustworthy across every surface.

- Halcyon direction
- Hanken Grotesk + IBM Plex Mono
- Vox Blue #4B57E8
- No gradients

01 · BRAND & LOGO

A voice made visible.

The mark is a three-bar audio level — the sound of a voice, abstracted. It reads instantly as "speak," scales to a 16px favicon, and comes alive as an equalizer while Vox listens.

- DO**
Keep clearspace equal to one bar-width on all sides. Use the solid indigo tile or a single-color mark on flat backgrounds.
- DON'T**
No gradients on the tile, no drop-shadows on the bars, no recoloring to yellow, and never stretch the bar rhythm.

02 · COLOR

One confident accent, cool neutrals.

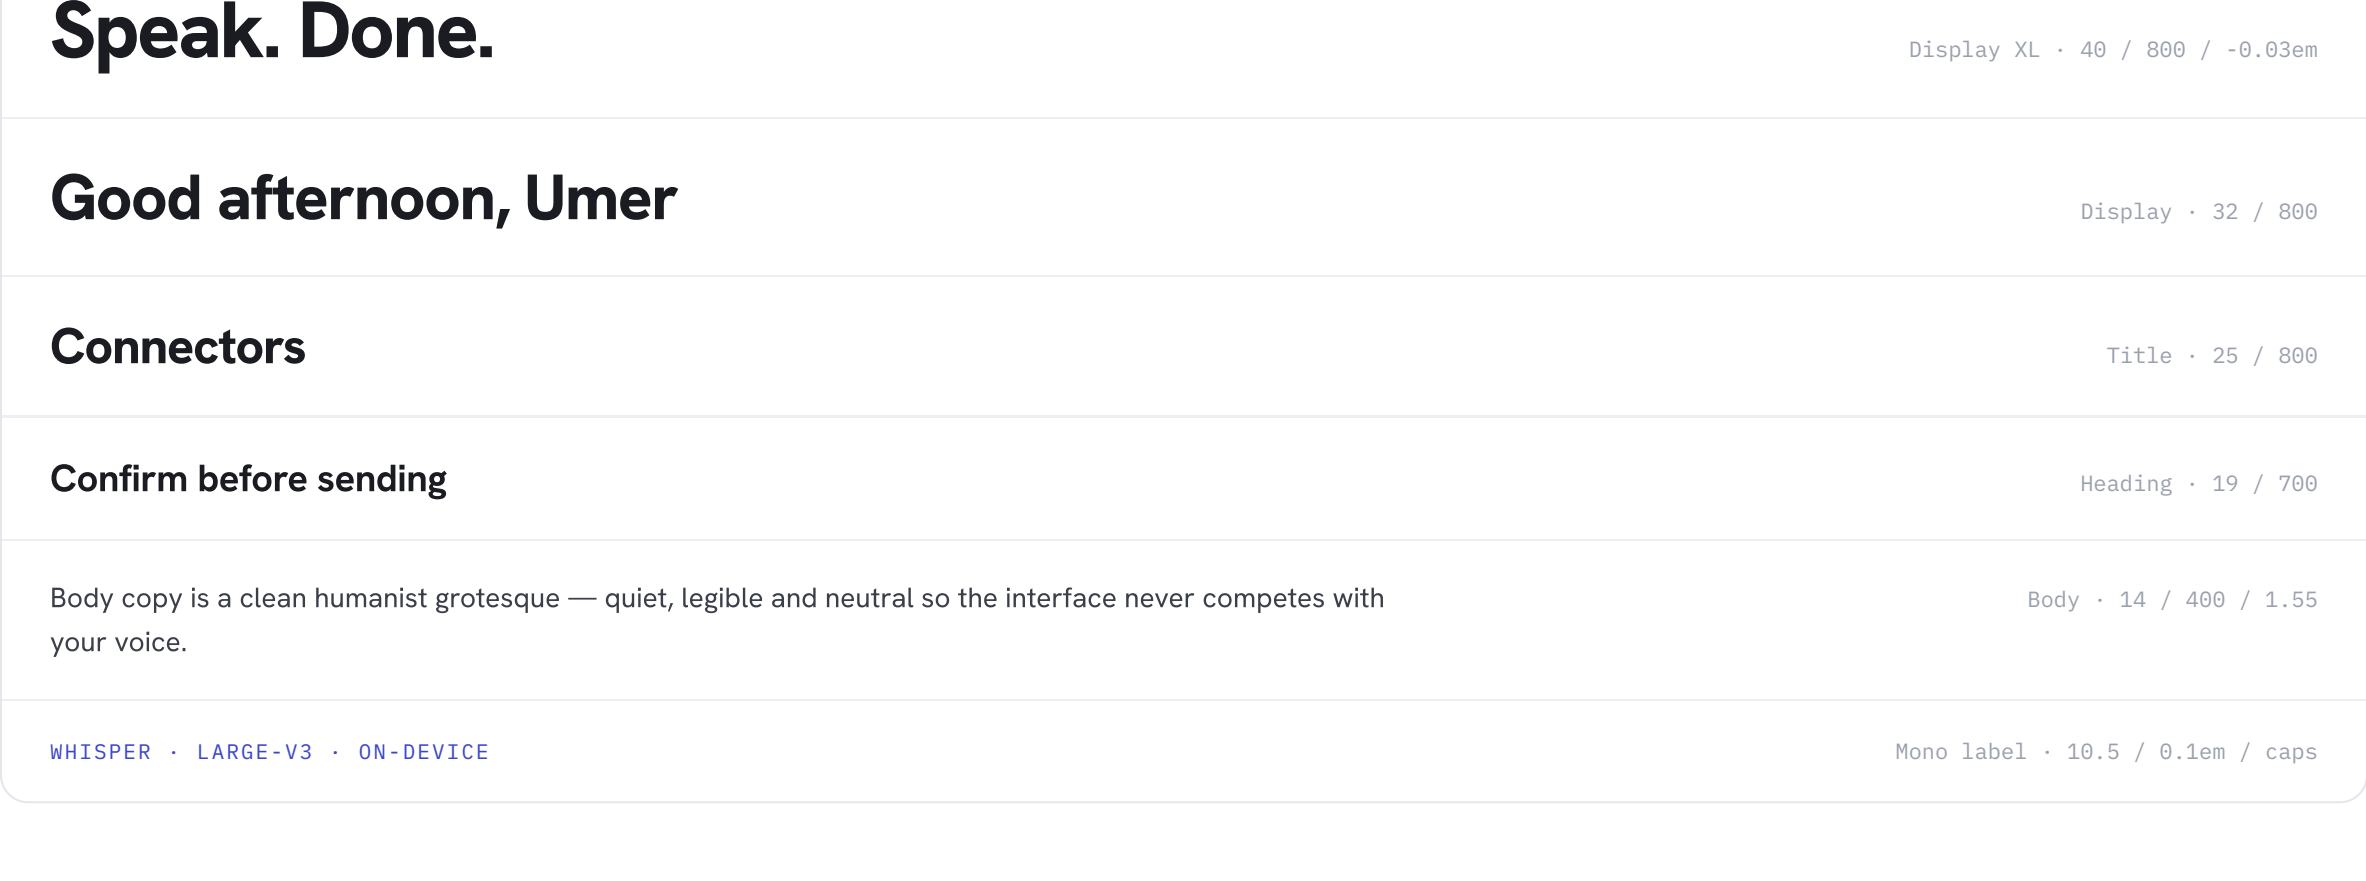

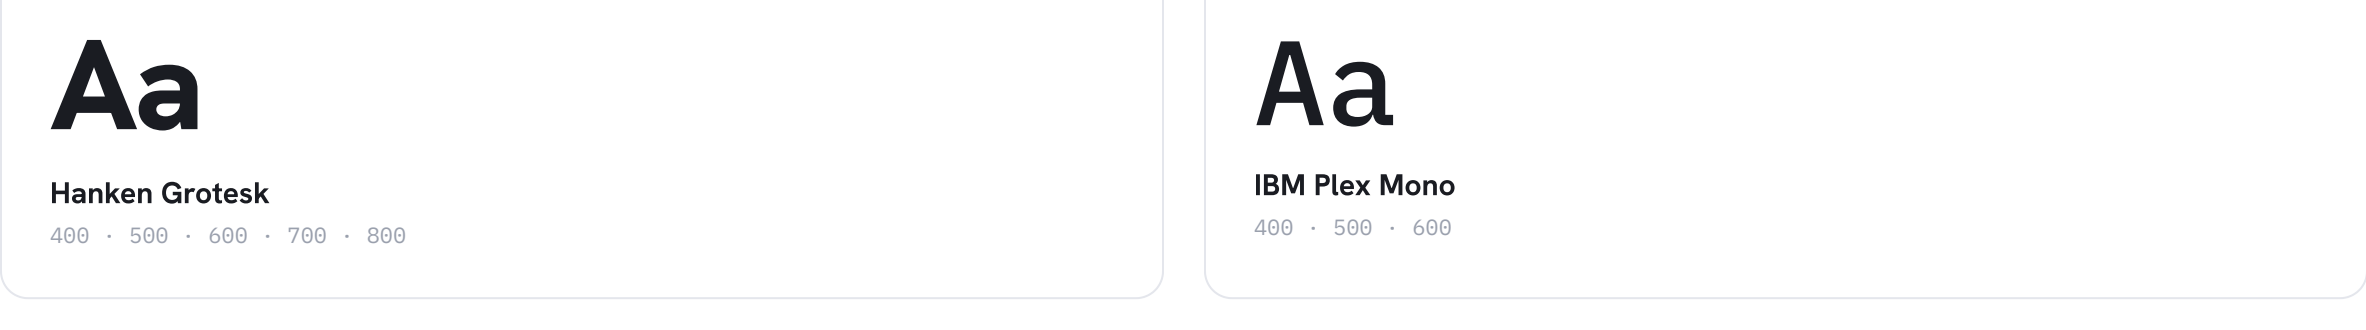

A single indigo — Vox Blue — carries every primary action and the "live" voice state. Everything else is a cool, near-neutral gray so the accent always has room to speak. Semantic hues stay muted and are used sparingly.

03 · TYPOGRAPHY

Humanist sans, monospace for truth.

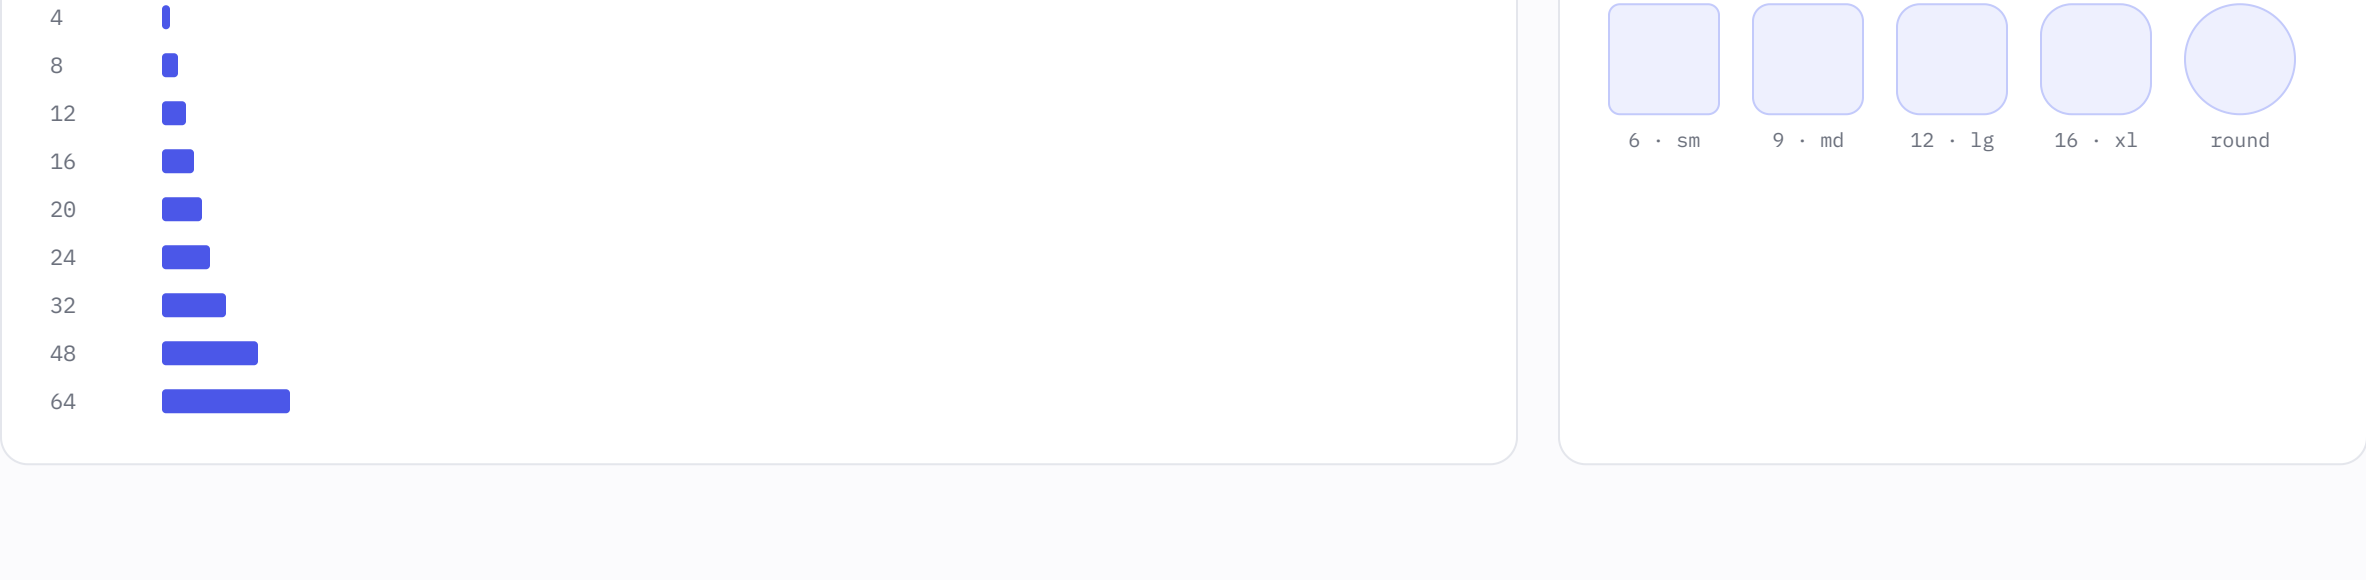

Hanken Grotesk handles everything a person reads — it's warm, quiet and highly legible at small sizes. IBM Plex Mono is reserved for anything the *machine* says: system labels, timestamps, keycaps, connector names and on-device data. That contrast is a core signal of the brand.

04 · SPACING & RADIUS

A 4px grid, soft corners.

Everything sits on a 4px rhythm. Corners are soft but never pill-shaped except for tags and status — controls round at 9-10px, cards at 12-16px, the window at 18px.

05 · ELEVATION

Borders first, shadow only when it floats.

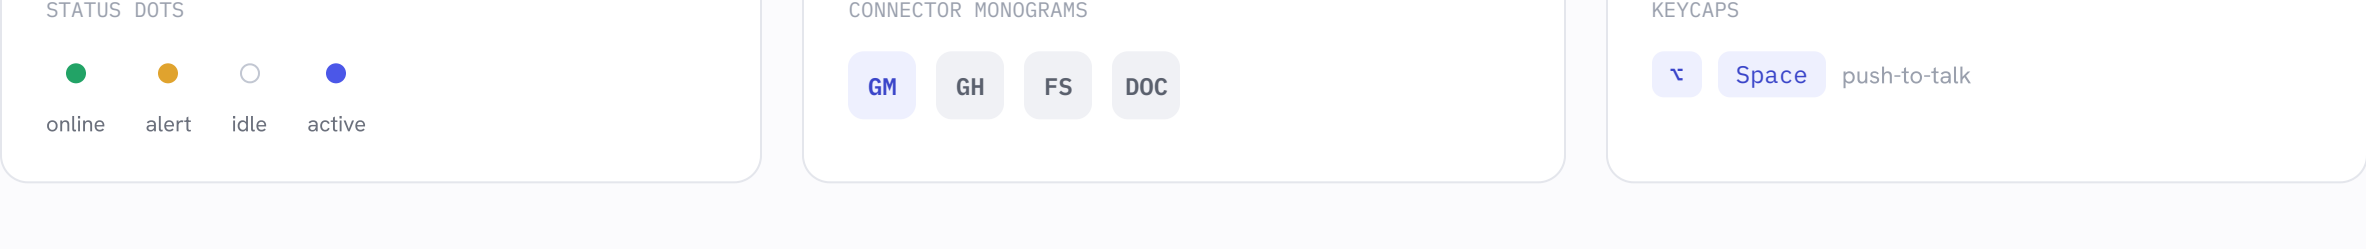

Most surfaces rest on a hairline border. Shadow is reserved for elements that genuinely lift off the page — the active mic, popovers, dialogs, and the window itself.

06 · ICONOGRAPHY

Quiet marks, no clutter.

Vox leans on three native devices instead of decorative icons: **status dots** for state, **mono monograms** for connectors, and **keycaps** for shortcuts. For true line icons (settings, search, close) use a 1.5px-stroke set such as Lucide, sized 18-20px in gray-500. Never use emoji.

07 · MOTION

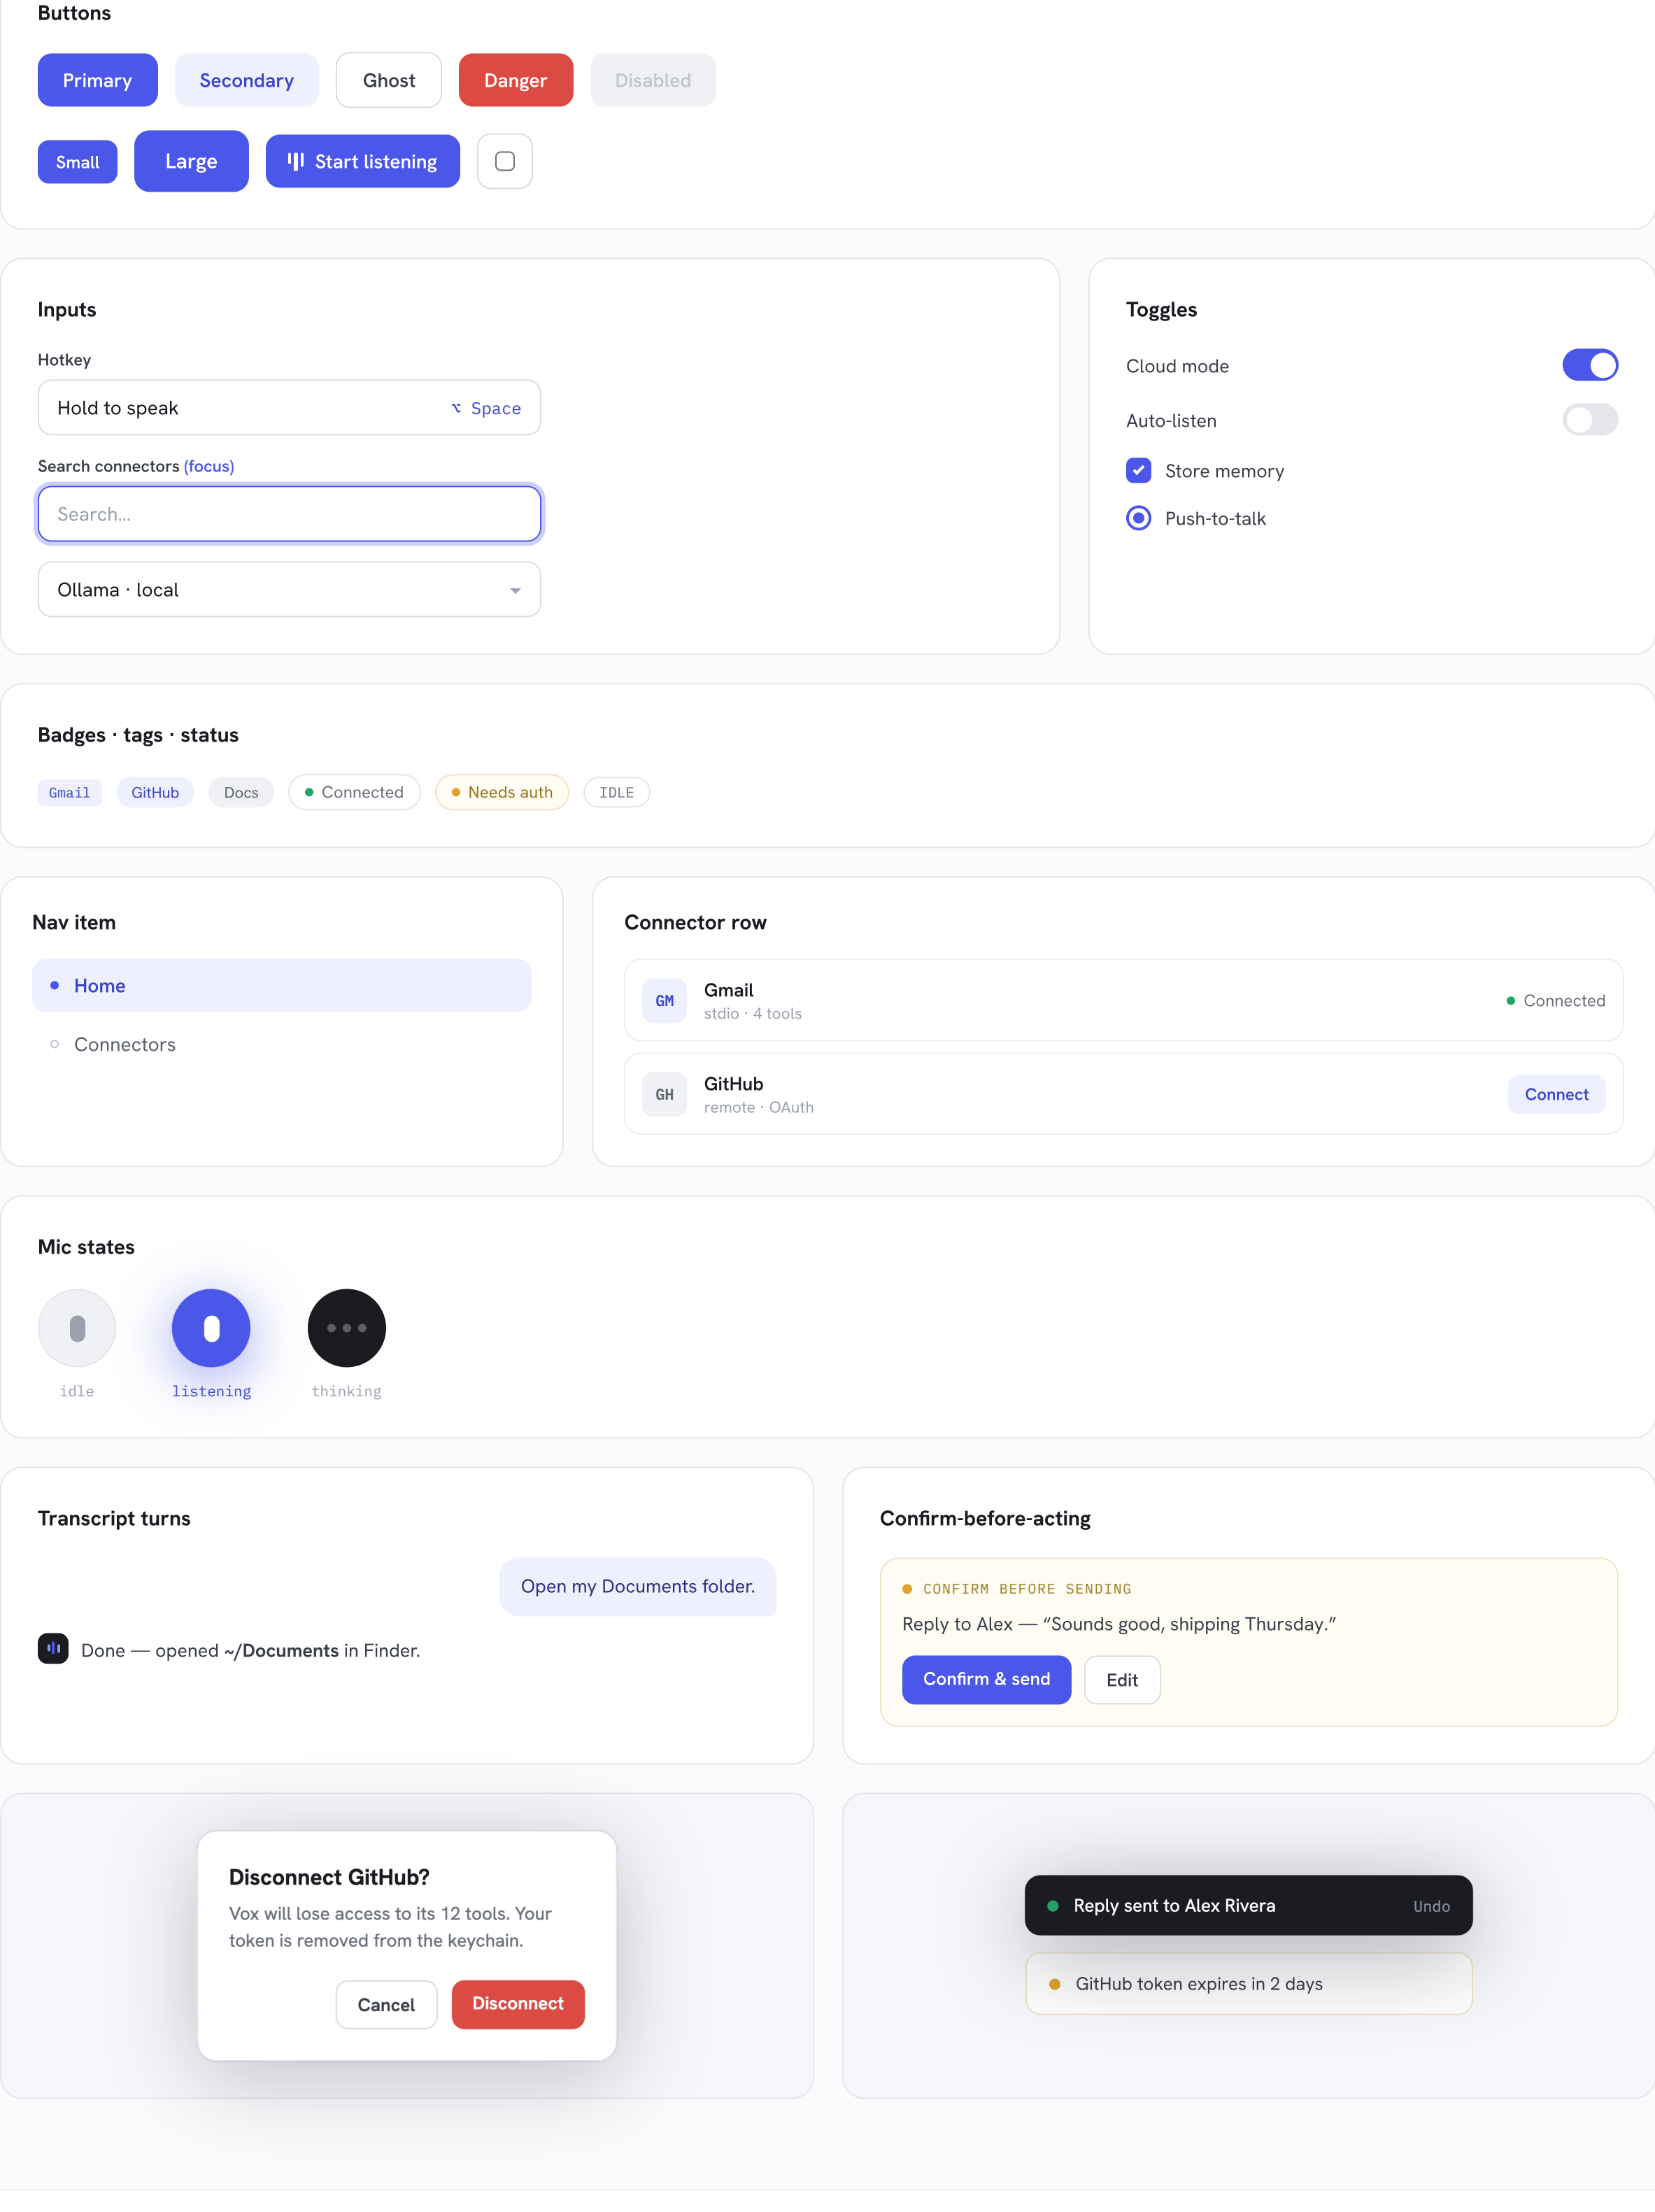

Only the voice moves.

The interface is still. The only looping motion is tied to voice — the equalizer bars and the listening pulse. Everything else is a brief, single easing on state change.

08 · COMPONENTS

The kit.

09 · VOICE & TONE

Calm, direct, never chatty.

Vox writes like a trusted operator: it states what it did, flags what needs a decision, and gets out of the way. Sentence case, no exclamation marks, no emoji. It says "I" sparingly and never over-explains.
